Question: Do older European teams routinely score higher than other teams?
How to read this report: The full leaderboard is below; rows shaded blue are European teams. Following sections summarize scores by country, by region (Europe vs. rest of world), and by team age bucket (computed from rookie year). The final cross tab pairs region with age bucket so the headline question can be read directly.

Leaderboard

Rank	Team #	Team name	Country	Region	City / State	Rookie yr	Age	Score
------	--------	-----------	---------	--------	--------------	-----------	-----	-------

Scores by country

Country	Teams	Mean	Median	Max
---------	-------	------	--------	-----

Europe vs. rest of world

Region	Teams	Mean	Median	Max
Europe	0	—	—	—
Rest of world	0	—	—	—

Scores by team age

Age bucket	Teams	Mean	Median	Max
------------	-------	------	--------	-----

Region × age bucket

Region	Age bucket	Teams	Mean	Median	Max
--------	------------	-------	------	--------	-----

Team age is computed as $(season\ year - rookie\ year)$ when rookie year is present in the source payload. Teams with unknown rookie year are listed under "Unknown" and are excluded from age-bucket aggregates. Region tag uses geographic Europe (not EU membership).
